Danny **Yu**

SDET · QA Automation

danny_yu_2@sfu.ca · yannydu.github.io · github.com/yannydu

Summary

Software developer in test with a foundation in test automation, API validation, and CI/CD from SDET and QA co-ops. Now building and operating production web platforms for SFU's STEM outreach program. Comfortable owning quality end to end, from Selenium suites and Wiremock stubs to running live services with real users.

Skills

Test automation (co-op experience)	Java, Selenium, Wiremock, Jenkins, Docker, SQL / Trino
Daily drivers	Python, JavaScript, HTML / CSS, git, Linux
Current tooling	`node --test`, Vitest, gitleaks, GitHub Actions, Cloudflare Workers / D1
AI-assisted development	Claude Code as a daily tool: custom skills, hooks, and subagents

Work Experience

SFU Science Alive (Faculty of Applied Sciences Outreach)
Burnaby, BC

School Programs and Instructional Lead
Jun. 2021 – Present

- Build and operate the program's production web platforms on Cloudflare Workers: a publishing gallery (509 camper projects from 416 campers), a curriculum system (356 activities by six writers), and public lesson sites (hundreds of visits a month), through a full summer of camps with zero worker errors.
- Own quality on all of them: `node --test` suites (59 and 45 files) on the gallery and lesson site, Vitest suite (58 files) on the curriculum platform, gitleaks full-history scan and typecheck/lint gates in CI on every push.
- Enforce privacy constraints as tested invariants: camper names pseudonymized before data reaches repos or backups, a fail-closed pre-push name guard, EXIF/GPS stripping verified in CI, camper-written code isolated on its own origin. Also teach K-8 coding camps.

Global Relay
Vancouver, BC

Software Development Engineer in Test (Co-op)
Jan. 2023 – Aug. 2023

- Implemented a single source of truth for regression tests using the Trino REST API.
- Built a JSON response builder in Java to validate API responses, eliminating manual response creation and improving efficiency.
- Generated Java language bindings from Thrift IDLs and integrated them with Wiremock containers to create test stub responses.

Incognito Software Systems Inc.
Vancouver, BC

QA Engineer Intern
Jan. 2022 – Aug. 2022

- Wrote automated tests in Java and Selenium for product GUIs and maintained a regression test schedule.
- Established a Docker and Jenkins-based continuous-testing environment, reducing infrastructure overhead.

Projects

ChessMate: A Smart Automated Chessboard
Burnaby, BC

SFU ENSC Capstone
Jan. 2024 – Aug. 2024

- Built the human-move detection module with a Raspberry Pi camera and OpenCV, comparing board states to identify the moved piece; drove an electromagnetic trolley in Python to execute the machine's moves.

Education

Simon Fraser University
Burnaby, BC

BASc in Computer Engineering
Graduated 2025
