Danny **Yu**

SDET · Python, Linux & CI

danny_yu_2@sfu.ca · yannydu.github.io · github.com/yannydu

Summary

Computer Engineering graduate (SFU, 2025) and software developer in test, with Python and Linux as daily drivers. Built test automation and a Docker + Jenkins continuous-testing environment in SDET and QA co-ops, and now runs production web platforms behind CI on every push. Capstone work on a Raspberry Pi paired Python with a camera and an electromagnetic trolley.

Skills

Daily drivers	Python, JavaScript, HTML / CSS, git, Linux
Test automation (co-op experience)	Java, Selenium, Wiremock, Jenkins, Docker, SQL / Trino
Current tooling (AI-assisted)	GitHub Actions, `node --test`, Vitest, gitleaks, Cloudflare Workers / D1
Embedded (capstone)	Raspberry Pi (ARM), OpenCV, Python
AI-assisted development	Claude Code as a daily tool: custom skills, hooks, and subagents

Work Experience

Global Relay
Vancouver, BC

Software Development Engineer in Test (Co-op) — *Jan. 2023 – Aug. 2023*

- Generated Java language bindings from Thrift IDLs and integrated them with Wiremock containers to create test stub responses.
- Built a JSON response builder in Java to validate API responses, and implemented a single source of truth for regression tests using the Trino REST API.

Incognito Software Systems Inc.
Vancouver, BC

QA Engineer Intern — *Jan. 2022 – Aug. 2022*

- Established a Docker and Jenkins-based continuous-testing environment, reducing infrastructure overhead.
- Wrote automated tests in Java and Selenium for product GUIs and maintained a regression test schedule.

SFU Science Alive (Faculty of Applied Sciences Outreach)
Burnaby, BC

School Programs and Instructional Lead — *Jun. 2021 – Present*

- Own quality on the program's production platforms: `node --test` suite (51 files) and Vitest suite, with typecheck, lint, and full-history gitleaks gates in CI on every push; a nightly GitHub Actions rebuild keeps the public lesson site current.
- Enforce privacy constraints as tested invariants: a fail-closed pre-push name guard, EXIF/GPS stripping verified in CI, camper-written code isolated on its own origin.
- Build and operate the platforms on Cloudflare Workers: a publishing gallery (509 camper projects from 416 campers, zero worker errors through a full summer) and a curriculum system (356 activities by six writers) replacing my earlier Python + Typst pipeline. Built with Claude Code; I own the test strategy and CI gates.
- Teach coding camps (Python, web dev, Arduino, LEGO robotics).

Projects

ChessMate: A Smart Automated Chessboard
Burnaby, BC

SFU ENSC Capstone — *Jan. 2024 – Aug. 2024*

- Built the human-move detection module with a Raspberry Pi camera and OpenCV, comparing board states to identify the moved piece; drove an electromagnetic trolley in Python to execute the machine's moves.

Education

Simon Fraser University
Burnaby, BC

BASc in Computer Engineering — *Graduated 2025*
