Danny **Yu**

Software Engineer · Full-Stack Web Platforms

danny_yu_2@sfu.ca · yannydu.github.io · github.com/yannydu

Summary

Computer Engineering graduate (SFU, 2025) with Java experience from SDET and QA co-ops, now building and operating three production web platforms for SFU's STEM outreach program. Built a curriculum platform where each activity is written once and reused across camps, ships behind CI, and uses agentic development daily: Claude Code with custom skills, hooks, and subagents, while owning the architecture and operations.

Skills

Daily drivers	Python, JavaScript, HTML / CSS, Typst, git, Linux
Ship with (AI-assisted, still internalizing)	TypeScript, Astro / Hono, Drizzle, Cloudflare (Workers, D1, R2), Docker
Co-op experience	Java, SQL / Trino, Thrift, Wiremock, Selenium, Jenkins
Agentic development	Claude Code as a daily tool: custom skills, hooks, and subagents; taking a spec to a deployed system and owning what ships

Work Experience

SFU Science Alive (Faculty of Applied Sciences Outreach)
Burnaby, BC

School Programs and Instructional Lead
Jun. 2021 – Present

- Built **campkit**, the program's curriculum platform (Hono + Drizzle on Workers; Cloudflare Access with SFU accounts). An activity is written once and assembled into camps: 356 activities and 25 camps authored by six curriculum writers, succeeding my Python + Typst pipeline.
- Built **spark-gallery**, a publishing platform for camper projects (Astro on Cloudflare Workers, D1, R2). Live through a full summer of camps: 509 camper projects from 416 campers, zero worker errors.
- Ship behind CI on every push: typecheck, lint, `node --test` and Vitest suites, and a full-history gitleaks scan; a nightly GitHub Actions rebuild keeps **hello-wattson**, the public lesson site (54 lessons, hundreds of visits a month), current.
- Designed the gallery's privacy model for minors: camper names pseudonymized before anything reaches the repo, and camper-written code served from an isolated origin so it can never touch the gallery's cookies.
- Build with Claude Code using custom skills, hooks, and subagents; the architecture, privacy, and operations decisions are mine.

Global Relay
Vancouver, BC

Software Development Engineer in Test (Co-op)
Jan. 2023 – Aug. 2023

- Built a JSON response builder in Java to validate API responses, and generated Java bindings from Thrift IDLs, integrating them with Wiremock containers for test stubs.
- Implemented a single source of truth for regression tests using the Trino REST API.

Incognito Software Systems Inc.
Vancouver, BC

QA Engineer Intern
Jan. 2022 – Aug. 2022

- Wrote automated GUI tests in Java and Selenium and maintained a regression test schedule.
- Established a Docker and Jenkins-based continuous-testing environment, reducing infrastructure overhead.

Projects

ChessMate: A Smart Automated Chessboard
Burnaby, BC

SFU ENSC Capstone
Jan. 2024 – Aug. 2024

- Built the human-move detection module with a Raspberry Pi camera and OpenCV, comparing board states to identify the moved piece; drove an electromagnetic trolley in Python to execute the machine's moves.

Education

Simon Fraser University
Burnaby, BC
